

**Cut Two**

**Place wings and body in kiln**

**Elmers school glue on edge of both wings, then sprinkle with medium 96 coe frit** (lightly press down on the glue to set frit and carefully dust off to the glued side and place in kiln)

### **Kiln Program for 96 coe segments 2**

**1 - ramp @ 300\* to 1350\*  
hold for 5 minutes**

**2 - ramp to 950\*  
hold for 10 minutes  
end program**

Kilns may vary so always do a test first. your frit should stick, but still retain a frost crystal like appearance

***Don't have a kiln?  
just skip that part and  
use iridized white!***

loop with small ribbon!

Glue wings and small bail to the body as shown and clip until dry. I like to use a two part 5 minute epoxy or clear silicone
